Thank you for your inquiry.

DMSO compatible materials include - Teflon (PTFE), polyethylene, Nylon, and polypropylene.

Again, thank you for your interest in our products.

Please let me know if I can be of further assistance.

With kindest regards,
Jeff Jacob

Besides glass, metals and wood, what other materials can safely come into contact with DMSO? Teflon? PTFE resin-coated?

I'm using a magnetic stirrer to stir the contents of a glass pitcher at room temperature and I'm wondering if the coating on the stir bar immersed in the liquid mixture will be safe for ingesting the DMSO mixture?
